EXPERIENCE

Job&Talent **Remote**
Staff Software Engineer — AI Agents November 2023 – Present

- Identified the opportunity for AI agents at the company, pitched it to leadership, and transitioned from Staff iOS to lead the effort — now architecting and shipping production multi-agent systems that power **Clara**, Job&Talent's AI recruitment platform (1.8M+ interviews conducted)
- Architected Clara's recruiter copilot — a **multi-agent chat assistant** (LangGraph, FastMCP) with an LLM-powered router dispatching to domain-specialized agents: deep analytics (SQL), candidate insights (hybrid vector + keyword search), pipeline status, and a RAG-backed knowledge base
- Built a full **RAG pipeline** (Notion docs → chunking → Vertex AI embeddings → Pinecone) with incremental sync and multi-query retrieval, powering real-time answers from internal documentation
- Designed and shipped an **autonomous Slack coding agent**: engineers @mention it in a bug thread, it clones the repo, runs a Claude Code session to analyze and fix the issue, and opens a PR — all end-to-end on the **Anthropic Agent SDK**
- Established engineering practices for the AI stack: hexagonal architecture, input/output guardrails (prompt injection detection, PII redaction), **Langfuse** tracing, and **OpenTelemetry** observability
- Earlier at J&T: contributed to the business app on iOS as part of a cross-functional team — shipped shift management, workforce planning, and operational features used across 10 countries

SpotOn **Remote**
Staff Software Engineer March 2023 – November 2023
Senior Software Engineer September 2021 – March 2023

- Led architecture redesign from monolith to **modularized clean architecture**, decreasing average build time by over 60% and enabling parallel feature development across teams
- Designed the core transaction-processing module for the company's flagship POS application; it shipped without issues after three prior failed rewrites and has served as the foundation for over two years
- Owned **internal SDKs and core libraries** shared across all mobile teams; introduced SwiftUI, CoreData, SPM, and XcodeGen into the stack
- Collaborated with backend engineers and solution architects on a company-wide scalable integration involving **sharding**, **Kafka**, and **Okta** auth
- Mentored two interns to full-time offers; improved recruitment screening criteria, reducing second-stage rejection rate by 25%

Zendesk **Remote**
iOS Software Engineer March 2021 – September 2021

- Shipped features in the *Support* and *Sell* products handling operations on millions of objects; championed and drove adoption of a modular architecture approach within the team

Summer Agency **Cracow, Poland**
iOS Developer / Tech Lead Nov 2019 – March 2021

- Led technical planning and client negotiations for BLE-connected health devices; managed cross-functional delivery as tech lead

Ailleron **Cracow, Poland**
iOS Developer July 2018 – Nov 2019

- Built and maintained a banking application; integrated Adyen SDK and WSPay payment gateways

INTERESTS & SKILLS

- Building AI agent systems is what I do now and what I want to keep doing. I spent 8+ years as a Staff iOS engineer first — that background gives me strong product intuition for developer tooling and an ability to evaluate agent output quality from the user's side, not just the model side
- Advocates for AI-augmented development across the organization: established **Claude Code** best practices, built an internal plugin marketplace (coding standards, MCP integrations, workflow agents) adopted by multiple teams, led company-wide benchmarking of AI coding tools, and speaks publicly about integrating AI into mobile team workflows
- Rapid, self-directed learner — went from zero backend/AI experience to shipping production **multi-agent systems**: ReAct agents, supervisor/router patterns, domain-specialized deep agents, **RAG pipelines**, hybrid search (SQL + vector), **MCP tool servers**, evaluation pipelines, and generative UI — while defining the architecture and engineering standards for a new team
- Fluent in **Python**, **TypeScript**, and **Swift** (8+ years); deep knowledge of iOS internals (ABI, ARC, async/await); personal projects built with **RevenueCat SDK** for subscription monetization

SPEAKING

1. 2025 @ Mobile Warsaw #101 – *Streamlining your mobile team's workflow with AI coding tools* (video)
2. 2024 @ letSwift #30, Wrocław – *Demystifying the ARC wizard*
3. 2023 @ SwiftHeroes, Turin – *Building high-performant programs by understanding Swift ABI*
4. 2023 @ CocoaHeads Kraków #41 – *What spells does the ARC wizard use?*
5. 2022 @ CocoaHeads Kraków #40 – *Building high-performant programs by understanding Swift ABI*

EDUCATION

Jagiellonian University, Faculty of Mathematics and Computer Science
Computer Science
Master's degree
